Abstracts

The global Belt Drive Axial Fan market size is expected to reach $ 2545 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032).

In 2025, global Belt Drive Axial Fan production reached approximately 1,927 k units?with an average global market price of around US$ 950 per unit, and a gross profit margin of approximately 20%-40%. Belt Drive Axial Fans are industrial air-moving devices in which an electric motor transfers rotational power to an axial impeller through belts, pulleys, bearings, and a drive shaft. The blades move air parallel to the fan axis, providing high airflow at low or moderate static pressure. The external motor arrangement protects the motor from hot, dusty, humid, corrosive, grease-laden, or contaminated air streams. Pulley changes allow rotational speed and airflow adjustment. The category includes belt-driven tube axial, vane axial, wall-mounted, roof-mounted, reversible, high-temperature, and explosion-protected fans but excludes direct-drive axial and centrifugal fans. The industrial chain of Belt Drive Axial Fans covers upstream materials and components such as steel plates, aluminum alloys, composite blades, electric motors, shafts, bearings, V-belts, pulleys, bushings, guards, mounting frames, sensors, controllers, lubricants, and protective coatings. The midstream includes aerodynamic design, blade forming, impeller production, housing fabrication, shaft machining, bearing installation, motor-base manufacturing, belt-drive assembly, alignment, dynamic balancing, surface treatment, airflow testing, pressure testing, vibration testing, and complete-machine assembly. Downstream channels include ventilation-equipment distributors, HVAC contractors, engineering companies, industrial suppliers, system integrators, and direct sales. End users include factories, mines, power plants, farms, warehouses, paint facilities, and process industries.
