## Abstracts

According to our latest research, the global Belt Driven Roller Conveyor market size will reach USD 510 million in 2031, growing at a CAGR of 5.3% over the analysis period.

Belt Driven Roller Conveyor is a type of conveyor system where a belt, typically placed underneath the rollers, drives the movement of the rollers and, consequently, the items on the conveyor. In this system, the rollers are powered by friction from the belt that runs underneath them, which is usually driven by a motor. This design allows for efficient transportation of items over short or long distances, making it suitable for various industries such as manufacturing, packaging, distribution, and logistics.
