A belt type blancher is a type of food processing equipment used to blanch food products in a continuous, automated manner. Blanching is a process where food is briefly immersed in boiling water or exposed to steam and then rapidly cooled, typically in ice water or by blowing cold air. This process is used to prepare the food for further processing, such as freezing, canning, or drying, and it helps to retain color, texture, and nutritional value. Belt type blanchers are used in large-scale food processing operations where high volumes of product need to be blanched efficiently and consistently. They are common in the frozen food industry, canning factories, and other commercial food processing facilities. The continuous process allows for a high production rate with minimal labor, ensuring that the blanched products maintain their quality and are ready for the next stage of processing.
