The global Belzutifan market size is expected to reach \$ 1637 million by 2032, rising at a market growth of 10.0% CAGR during the forecast period (2026-2032).

In 2025, global Belzutifan production reached approximately 42,000 units. Belzutifan is an orally administered small-molecule hypoxia-inducible factor-2 alpha (HIF-2?) inhibitor used for the treatment of tumor diseases associated with abnormalities in the hypoxia signaling pathway. The drug selectively inhibits HIF-2? transcriptional activity, thereby reducing the expression of downstream pro-tumor genes, such as those involved in angiogenesis and cell proliferation, ultimately suppressing tumor growth and slowing disease progression. Belzutifan is primarily indicated for the treatment of von Hippel-Lindau (VHL) disease-associated tumors and advanced renal cell carcinoma (RCC), and it represents an important emerging innovative therapy targeting tumor metabolism and hypoxia pathways.

Belzutifan, as the first approved HIF-2? inhibitor, is positioned in the early high-growth stage of the emerging targeted oncology therapy market. It is primarily used in the treatment of von Hippel-Lindau (VHL) disease-associated tumors and advanced renal cell carcinoma (RCC). In recent years, with the advancement of precision oncology and the further elucidation of the role of hypoxia signaling pathways in tumorigenesis, the HIF-2? target has become an important direction for next-generation anticancer drug development. Against this backdrop, Belzutifan has established a first-mover advantage in the market due to its innovative mechanism and demonstrated efficacy in VHL-associated tumors. However, the field is still in an early stage of commercialization, with a relatively limited patient population and an incompletely realized market potential. At the same time, it faces competitive pressure from VEGF inhibitors and immunotherapy-based combination regimens. Therefore, its future market growth will largely depend on

indication expansion, development of combination therapies, and increased penetration in larger indications such as renal cell carcinoma.

This report studies the global Belzutifan production, demand, key manufacturers, and key regions.
