The global Bench-top UV Transilluminator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Bench-top UV transilluminator is a laboratory instrument used for visualizing and analyzing nucleic acids, such as DNA or RNA. It consists of a flat surface, usually made of glass or plastic, that is illuminated by ultraviolet (UV) light from below. When nucleic acids are stained with a fluorescent dye and placed on the surface of the transilluminator, they become visible under the UV light. Bench-top UV transilluminators are commonly used in molecular biology research, genetic testing, and forensic analysis.
