## Abstracts

According to our (Global Info Research) latest study, the global Benchtop ELISA Workstation market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The benchtop ELISA workstation market is expected to grow due to the increasing demand for point-of-care testing, rising prevalence of various chronic and infectious diseases, and advancements in automation technologies. Additionally, the increasing use of benchtop ELISA workstations in research and development activities is expected to drive the market growth. However, high initial setup costs and skilled personnel requirements are some of the factors that may limit market growth.

The benchtop ELISA workstation is a specialized laboratory instrument designed to automate and streamline the ELISA (Enzyme-Linked Immunosorbent Assay) immunoassay process. Typically, they are compact, self-contained units that can perform multiple steps involved in the ELISA immunoassay testing process, including sample preparation, reagent addition, incubation, and detection, all within a single device. The workstation can handle multiple wells simultaneously and can perform up to 96 tests at once, with reduced assay times and improved consistency. Some workstations have additional features, such as software for data analysis and the ability to perform multiple immunoassay protocols on a single platform. Benchtop ELISA workstations are used in clinical laboratories, research institutions, and biopharmaceutical companies for a variety of applications, including infectious disease diagnosis, cancer detection, and drug discovery. The benefits of benchtop ELISA

workstations include increased speed and efficiency, reduced human error, high sensitivity and specificity, and the ability to perform multiple assays simultaneously. Overall, the benchtop ELISA workstation offers a valuable tool for medical professionals and researchers in the detection, diagnosis, and management of a wide variety of diseases and conditions.
