Abstracts

A Benchtop nuclear magnetic resonance spectrometer (Benchtop NMR Spectrometer) refers to a Fourier transform nuclear magnetic resonance (FT-NMR) spectrometer that is significantly more compact and portable than the conventional equivalents, such that it is portable and can reside on a laboratory benchtop. This convenience comes from using permanent magnets, which have a lower magnetic field and decreased sensitivity compared to the much larger and more expensive cryogen cooled superconducting NMR magnets. Instead of requiring dedicated infrastructure, rooms and extensive installations these benchtop instruments can be placed directly on the bench in a lab and moved as necessary (e.g., to the fumehood). These spectrometers offer improved workflow, even for novice users, as they are simpler and easy to use. They differ from relaxometers in that they can be used to measure high resolution NMR spectra and are not limited to the determination of relaxation or diffusion parameters.

Scope of the Report:

This report focuses on the Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Overall, the Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer performance is positive, despite the weak economic environment.

The technical barriers of Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer

are high. The manufacturing bases relative concentration; some of the key players dominating this market are Bruker, Thermo Fisher, Oxford Instruments, Nanalysis, and others.
