Abstracts

The global Benchtop Spectrofluorometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Benchtop Spectrofluorometers consist of a light source, a monochromator, a sample compartment, and a detector. The light source emits a specific wavelength of light into the monochromator, which then selects a specific wavelength of light to excite the sample. The sample compartment holds the sample, and the detector measures the intensity and wavelength of the emitted fluorescent light.
