Urology is a branch of medicine that deals with the health of the urinary tract and reproductive tract in men and women. Urologic diseases or conditions include infection in the urinary tract, bladder control problems, kidney stones and prostate problems, among others. The prostate gland surrounds the urethra, the tube that carries urine from the bladder out of the body. Benign prostatic hyperplasia (BPH) is an enlarged prostate, which increases the size of the prostate gland. As the prostate gets enlarged, it may squeeze or partly block the urethra, resulting in significantly blocking urine flow. BPH is normal in the aging process of a male, caused by changes in hormone balance and cell-growth.

Scope of the Report:

This report focuses on the Benign Prostatic Hyperplasia (BPH) Drugs in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing demand for Benign Prostatic Hyperplasia (BPH) Drugs drives the market. Three factors contributing to the growth of the global benign prostatic hyperplasia drugs market are growing geriatric male population, strong r&d and growing demand for alpha-blockers. The evolution of alpha-blockers therapy for BPH has focused on improving convenience and tolerability. Reversing signs and symptoms or preventing progression of the disease are the indications of treating BPH. Alpha-blockers are the most effective, least costly, and best tolerated of the drugs for relieving

LUTS. Additionally, one driver in market is growing geriatric male population. The presence of a large population with BPH symptoms is expected to drive the market growth. The risk of BPH increases exponentially with the rise in the age of an individual. Approximately, 80% of men who reach 60 years and above have mild to strong symptoms of BPH. This disorder affects one in 38 individuals in the age group of 40-59 years; however, in the age group of 60-69 years, it affects one in 14 individuals. The BPH drugs market in the Americas accounted for the majority market share during 2016 and the market in this region is likely to experience a high growth rate during the estimated period. Factors such as the growing demand for urology-related disorders and the increasing rate of geriatric men population, will stimulate the demand for BPH drugs and fuel the market's growth.

The worldwide market for Benign Prostatic Hyperplasia (BPH) Drugs is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
