Abstracts

According to our (Global Info Research) latest study, the global Bentonite Powder market size was valued at US\$ 1507 million in 2025 and is forecast to a readjusted size of US\$ 1939 million by 2032 with a CAGR of 3.7% during review period.

The name bentonite was first suggested in 1898 for clay hosted by the Benton Shale in Wyoming. It was initially described as clay formed by the alteration of volcanic ash, but the most widely used commercial definition is that bentonite is clay consisting essentially of smectite minerals (usually montmorillonite) regardless of occurrence or origin.

Most economic bentonite deposits are of Cretaceous age or younger and associated with marine shale and marl (Wyoming), calcareous sands and marls (Morocco), carbonaceous shales and coal (South Africa), sandstone and conglomerate (Australia), dacitic pyroclastics and tuffs (Milos), andesite (China) or rhyolite and obsidian/perlite (China and Mozambique). Bentonite is characterised by exchangeable cations such as Ca^{2+} , Mg^{2+} , Na^{+} or Li^{+} which affect its designation and properties. For example, bentonite is typically described as either swelling or nonswelling bentonite. Swelling bentonite (also known as western bentonite) is sodium bentonite that swells in water and is generally used in its natural state. Non-swelling bentonite is calcium bentonite (also known as southern bentonite) that is used as mined, after treatment with soda ash to produce sodium-exchanged bentonite, or treated with acid to produce bleaching clay. Li-rich bentonite is known as hectorite and is commercially mined only in the US.

The main Bentonite Powder players include Amcol (Minerals Technologies), Imerys (S&B), Clariant, etc. The top three Bentonite Powder players account for approximately

42% of the total global market. North America is the largest consumer market for Bentonite Powder, followed by China and Europe. In terms of Type, Sodium Bentonite is the largest segment, with a share about 92%. And in terms of End Users, the largest application is Iron Ore Pelletizing, followed by Molding Sands.
