Abstracts

According to our (Global Info Research) latest study, the global Benzenecarboxylic Acid market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Benzoic acid (C6H5COOH), is a colorless crystalline solid and a simple aromatic carboxylic acid. The name is derived from gum benzoin, which was for a long time its only known source. Benzoic acid occurs naturally in many plants and serves as an intermediate in the biosynthesis of many secondary metabolites. Salts of benzoic acid are used as food preservatives and benzoic acid is an important precursor for the industrial synthesis of many other organic substances. The salts and esters of benzoic acid are known as benzoates.

By end-use industry, the benzoic acid market is segmented into chemical, food & beverages, pharmaceutical, and others. The food & beverages segment is estimated to account for the major share of the overall market in 2018 during the forecast period. The ongoing urbanization and changing lifestyle of masses are the factors leading to the increased demand for packaged food items. Benzoic acid, which is majorly consumed as sodium benzoate and potassium benzoate, is directly used as a food preservative in the food & beverages end-use industry. Thus, increase in demand for packaged food leads to the growth of the benzoic acid market across the globe.

The Global Info Research report includes an overview of the development of the Benzenecarboxylic Acid industry chain, the market status of Plasticizers (Food Grade, Pharmaceutical Grade), Food Preservative (Food Grade, Pharmaceutical Grade), and key enterprises in developed and developing market, and analysed the cutting-edge
