Abstracts

Benzidine yellow is a yellow powder with a melting point of 317°C. It turns green slightly when heated at 150°C for 20min. The density is 1.24-1.53g/cm³. In concentrated sulfuric acid, it is red light, and after dilution, it is brown light red; in concentrated nitric acid, it is brown light yellow. Compared with C.I. Pigment Yellow 1, this product has stronger solvent resistance and migration resistance, higher tinting strength, better light fastness and transparency. Widely used in printing ink, can be used in packaging printing ink, in the United States, it can be used in water-squeezing inversion color paste formulation; it can also be used in paint printing and plastic coloring, soft PVC has certain migration, and good heat resistance makes it suitable for polyurethane foam Plastic coloring.
