Abstracts

The global Benzimidazolone Azo Pigments market size is expected to reach \$ 1672 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Benzimidazolone azo pigments are high-performance organic pigments containing a benzimidazolone group in their molecular structure. They are chemically stable and renowned for their excellent lightfastness, heat resistance, solvent resistance, and migration resistance. They are extremely important in high-end applications such as plastics, paints, inks, and synthetic fibers, outperforming general azo pigments. The upstream supply chain primarily relies on fine chemical raw materials, with core intermediates including 5-aminobenzimidazolone, acetoacetylaminobenzimidazolone (AABI), and various substituted primary aromatic amines, hydrochloric acid, and sodium nitrite. The quality of the synthesized benzimidazolone group directly determines the final resistance properties of the pigment.

Benzimidazolone azo pigments are very important high-performance organic pigments. The annual production capacity is approximately 90,000 tons. The market price per ton ranges from US\$11,500 to US\$16,590. The industry's gross profit margin is in the range of 18%–35%. Yellow products play an important role in coatings applications, while red products are important in plastics and ink applications.
