According to our (Global Info Research) latest study, the global Benzoic Acid Retagliptin Tablets market size was valued at US\$ 61.43 million in 2025 and is forecast to a readjusted size of US\$ 32.50 million by 2032 with a CAGR of 6.1% during review period.

Fultagliptin Benzoate Tablets are innovative domestic oral hypoglycemic drugs belonging to dipeptidyl peptidase 4 (DPP-4) inhibitors. It selectively inhibits the activity of dipeptidyl peptidase 4, prolongs the action time of incretins in the body, stably regulates the secretion of insulin and glucagon, and thereby effectively controls blood glucose. With mild hypoglycemic effect and good tolerance, it is mainly applied to improve blood glucose and carry out chronic disease management in adult patients with type 2 diabetes, and occupies an important position in clinical hypoglycemic treatment. In 2025, global Fultagliptin Benzoate Tablets production reached approximately 2.1 million bottles.

As a domestic Class 1 innovative DPP-4 inhibitor, Fultagliptin Benzoate Tablets boast differentiated clinical advantages and policy support, enjoying broad development prospects in the type 2 diabetes treatment market. Independently developed by Salubris Pharmaceuticals, the drug was approved for marketing in 2024 and quickly included in the National Medical Insurance Catalogue, which greatly improves patients' medication accessibility and market access capability. In clinical practice, it features a low risk of hypoglycemia, neutral impact on body weight and favorable tolerance. It can be used as monotherapy or combined with drugs such as Metformin to meet the treatment needs of patients at different disease stages. At present, the domestic DPP-4 inhibitor market is still dominated by imported original research drugs, while the supply of domestic

innovative varieties is relatively insufficient. As one of the few domestic original research products, Fultagliptin Benzoate Tablets is expected to gradually replace imported products by virtue of price advantages and channel expansion. Meanwhile, with the rising prevalence of diabetes, the continuous improvement of the chronic disease management system and the growing demand in primary medical markets, this product has long-term sales growth potential. Driven by medical insurance policies, clinical guideline recommendations and corporate academic promotion, Fultagliptin Benzoate Tablets will hopefully become a key growth driver in the domestic hypoglycemic drug market and promote the breakthrough and development of domestic innovative drugs in the field of metabolic diseases.
