Abstracts

The global Benzoin Resin market size is expected to reach \$ 301 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Benzoin Resin is a natural aromatic resin obtained from the bark of *Styrax* tree species (primarily *Styrax tonkinensis* and *Styrax benzoin*), widely used in fragrances, incense, pharmaceuticals, food flavoring, and traditional medicine. It contains benzoic acid, benzyl benzoate, vanillin-like compounds, and other aromatic resinoids that provide fixative, preservative, and soothing properties. The supply chain begins with resin tapping in Southeast Asian countries such as Indonesia, Laos, Thailand, and Vietnam, where smallholder farmers harvest and sun-dry the raw gum resin. The material is then collected by local traders and exported to processors that perform cleaning, grading, solvent extraction (to produce benzoin resinoid or absolute), distillation, and purification. Midstream players convert it into fragrance ingredients, pharmaceutical excipients, tinctures, or flavor compounds. Downstream, it is supplied to perfumery houses, cosmetic brands, incense manufacturers, food ingredient companies, and pharmaceutical formulators. The market structure is highly fragmented at the upstream agricultural level but more consolidated among fragrance and specialty chemical processors, with value added primarily during extraction, standardization, and formulation stages. In 2025, global Benzoin Resin output was about 32,000 tons, with 48,000 tons of capacity. Prices range from USD 5,000 ? 9,000 per ton, with roughly 22% gross margin.
