Abstracts

According to our (Global Info Research) latest study, the global Benzyltoluene market size was valued at US\$ 341 million in 2025 and is forecast to a readjusted size of US\$ 445 million by 2032 with a CAGR of 3.9% during review period.

Benzyltoluene is a high-temperature synthetic heat transfer fluid with good thermal stability, oxidation resistance, and a low pour point. It is a mixture of aromatic hydrocarbons (mainly monobenzyltoluene and dibenzyltoluene) produced by the reaction of benzyl chloride with toluene. It is typically a colorless liquid with excellent high-temperature resistance, oxidation resistance, and low pour point characteristics, and is widely used as an impregnating agent for power capacitors and as a high-temperature heat transfer oil.

The main upstream raw materials are benzyl chloride and toluene, which are synthesized through the Friedel-Crafts alkylation reaction. The industry is significantly affected by fluctuations in crude oil prices and environmental regulations.

Global sales in 2025 are projected to be approximately 48,000 tons, with an average market price of around US\$6,900 per ton. The industry's gross profit margin is in the range of 15%-30%.

As the demand for heat transfer fluids with higher temperature stability and lower vapor pressure increases, benzyl toluene, an aromatic compound with excellent thermal stability and a high boiling point, has seen a surge in market demand, driving manufacturers to expand production capacity and invest in technology. Simultaneously, global efforts to improve thermal efficiency and implement energy-saving policies are prompting upstream and downstream industries to increase investment in high-

performance heat transfer media to improve industrial thermal management efficiency.

Due to the availability of various alternative heat transfer fluids on the market, such as certain synthetic esters and silicone oils, which offer superior environmental or cost performance, benzyl toluene is facing some market share pressure from these alternatives, particularly in applications with higher environmental performance requirements.
