## Abstracts

According to our (Global Info Research) latest study, the global Betaine Monohydrate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Betaine Monohydrate is a crystalline form of betaine, a compound containing crystal water molecules. Betaine is a compound that occurs naturally in plant and animal cells, also known as betaine salt or betaine.

Betaine plays an important physiological role in organisms, helping to regulate water balance in cells, promoting protein folding and stability, and participating in some metabolic processes. Therefore, betaine is widely used in fields such as agriculture, food, feed and medicine.

The crystalline form of betaine monohydrate means that its crystal structure contains one molecule of water of crystallization. Water of crystallization is a water molecule physically adsorbed in a crystal, and different crystalline forms may contain different amounts of water of crystallization. For betaine, betaine monohydrate means that each crystallization of betaine molecules contains one molecule of water.
