A bevel box, also known as a bevel gearbox, is a type of reduction gear used for motors. It is primarily utilized in large machinery and industrial equipment as a power source. A bevel box can alter the direction of the motor's rotation shaft by 90 degrees in either an upward, downward, left, or right direction. Depending on the model, the shaft may be split into two or four sections, allowing for the transmission of drive torque in various directions. Bevel boxes also feature built-in gears for torque reduction from the motor.
