## Abstracts

The global Beverage Fountain System market size is expected to reach \$ 1899 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

A beverage fountain system refers to a complete liquid supply and dispensing equipment system used in catering establishments, cinemas, convenience stores, hotel self-service areas, and event banquets for the centralized supply, mixing, and distribution of beverages. It generally includes beverage syrup or concentrate storage tanks, refrigeration and carbonation units (for carbonated beverages), a proportioning mixing device, a delivery pump or pneumatic system, dispensing valves/faucets, and temperature and flow control, cleaning, and hygiene management modules. The system can mix drinking water, carbon dioxide, and various beverage syrups online in a set ratio and supply them at a constant temperature, or refrigerate and circulate premixed beverages for display, achieving continuous dispensing of multiple flavors and at multiple stations. It balances dispensing efficiency, taste stability, and on-site visual appeal, and is one of the core pieces of equipment for replacing bottled/canned beverages, improving unit dispensing cost control, and enhancing the self-service experience. In 2025, sales volume was 280,000 units, with an average price of US\$3,900, total production capacity of 320,000 units, and a gross profit margin of 33%. From the demand side, beverage fountain systems have evolved from simply 'a soda machine in a fast-food restaurant' to a standard feature for chain brands to improve space efficiency and customer experience. On one hand, QSR fast-food chains, cinemas, convenience stores, office buildings, and park canteens are constantly expanding. Self-service beverage/refill models help increase average transaction value, dwell time, and repeat purchase rates, prompting new stores to incorporate fountain systems into their decoration and equipment plans from the outset. On the other hand, the trends of healthy eating and product diversification mean that fountain systems are

no longer limited to carbonated drinks; they are now also dispensing juices, teas, functional drinks, low-sugar/sugar-free beverages, and even flavored sodas. Whoever can provide more flavors, more consistent taste, and a better self-service experience within limited machine slots is more likely to be selected as 'standard equipment' by brands. For chain groups, the core value of this type of equipment has shifted from 'selling a few drinks' to a comprehensive tool for 'improving the overall dining experience and controlling beverage profit margins.'

From a supply and business model perspective, competition in the beverage fountain system market is shifting from 'price competition for single-machine hardware' to integrated services encompassing 'equipment + concentrated syrup supply + remote operation and maintenance + data platform.' Large beverage brands, local bottling plants, and equipment manufacturers often operate on a razor-and-blade model where 'machines barely make a profit, relying on syrup and long-term supply to recoup costs.' Simultaneously, more and more equipment is connecting to the Internet of Things (IoT) to remotely monitor data such as dispensing volume, flavor profile, temperature, and carbonation levels, helping brands conduct regional sales analysis, replenishment forecasting, and promotional design. Against the backdrop of combined environmental and cost pressures, the advantages of self-service fountains over bottled/canned beverages in terms of packaging reduction, warehousing and transportation, and unit dispensing costs will continue to amplify. This also means that in the future, there is a greater opportunity to move beyond simply 'selling carbonated beverages' and evolve towards 'multi-category beverage modules + membership system integration + differentiated subsidy strategies'? manufacturers who can upgrade fountain systems into 'offline beverage traffic entry points + data entry points' will gain stronger bargaining power and higher overall profitability in chain negotiations.
