Beyond 5G (B5G) refers to the evolutionary and transitional stage of mobile communication systems between 5G and 6G. It aims to extend and enhance 5G capabilities by delivering higher data rates, ultra-low latency, massive connectivity, and advanced intelligence in network operations. Beyond 5G is not only considered an extension of 5G-Advanced but also integrates emerging technologies such as AI-driven networking, integrated terrestrial and non-terrestrial networks (including satellite communications), programmable network architectures, and integrated sensing and communication. It transforms traditional communication networks from merely connecting people and devices into a unified infrastructure of “communication, computing, sensing, and intelligence,” serving as a foundational step toward future 6G systems.
