According to our (Global Info Research) latest study, the global Bi-colour Level Gauge market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Two-color level gauges are used to detect water and steam levels in boilers. They rely on the optical principle of light refraction through two colored optical filters with different refractive indices. A special red and green illuminator is installed on the back of the instrument body to create a dual lighting system. The light passes through the fluid, allowing you to see the red vapor and the green liquid. This allows the water level and steam level in the boiler to be determined.
