Abstracts

A bistable brake is one that can stay in the 'on' or 'off' position without consuming energy from an outside source. To switch a bistable brake from 'on' to 'off' or vice versa, all that is needed is a pulse of direct current with a duration of the order of 100 milliseconds. Because no power is consumed except during switching pulses, the energy consumed and the heat dissipated are much less than in the case of an ordinary electromagnetic brake.
