Abstracts

According to our (Global Info Research) latest study, the global Bias Cutter for Textile Cord market size was valued at US\$ 762 million in 2025 and is forecast to a readjusted size of US\$ 1108 million by 2032 with a CAGR of 5.6% during review period.

A Bias Cutter for Textile Cord is a specialized cutting machine used in the manufacture and repair of textile-reinforced conveyor belts. Unlike steel cord belts, which have steel cables as reinforcement, textile cord belts use synthetic materials like polyester, nylon, or aramid as reinforcement. In 2025, global Bias Cutter for Textile Cord production reached approximately 7,049 units, with an average global market price of around 105 K US\$/Unit. The production capacity of Bias Cutter for Textile Cord reaches 8,800 units, and the industry's gross profit margin is approximately between 20% and 40%.

The market demand for bias cutters for textile cord continues to grow, mainly driven by multiple factors such as the expansion of global radial tire production capacity, the increased demand for high-performance, low rolling resistance tires from new energy vehicles, the upgrading of tire manufacturing towards high precision and intelligence, and the accelerated substitution of imports by domestically produced high-end equipment. As tire companies continue to raise their requirements for cord cutting precision, tension control stability, automated production scheduling, and flexible changeover capabilities, traditional semi-automatic equipment is being phased out at an accelerated pace, driving mid-to-high-end cutting machines with servo control, visual correction, intelligent material scheduling, and MES system integration capabilities to become the mainstream.
