Biaxial orientation is a process whereby a plastic film or sheet is stretched in such a way that the polymeric chains are oriented parallel to the plane of the film. Biaxially oriented films exhibit exceptional clarity, very high tensile properties, improved flexibility and toughness, improved barrier properties, and can be relatively easily made shrinkable. BoPET (biaxially oriented polyethylene terephthalate) is a polyester film made from stretched polyethylene terephthalate (PET) and is used for its high tensile strength, chemical and dimensional stability, transparency, reflectivity, gas and aroma barrier properties, and electrical insulation. BOPP films (Biaxially Oriented PolyPropylene Films) are produced by stretching polypropylene film in both machine direction and transverse direction.

This report studies the global Biaxially Oriented Films production, demand, key manufacturers, and key regions.
