Abstracts

The global Biaxially Oriented Polyamide (nylon) Film (BOPA) market size is expected to reach \$ 1608 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

Biaxially Oriented Polyamide (nylon) Film (BOPA) is a high-performance plastic packaging material produced by stretching nylon film in both the machine and transverse directions. This biaxial orientation process significantly enhances the film's mechanical strength, puncture resistance, barrier properties, and dimensional stability. In 2025, global Biaxially Oriented Polyamide (nylon) Film (BOPA) sales reached approximately 514.7 kilotons, with an average price of 2,496 USD/Ton.

The global Biaxially Oriented Polyamide (nylon) Film (BOPA) market has entered a mature stage, with downstream demand for conventional packaging films largely saturated and limited capacity to absorb new supply. Continued capacity expansion, particularly in China, is intensifying competition and compressing profit margins, while price volatility of Nylon 6 has further weakened BOPA's competitiveness against alternatives such as BOPET. Although the era of rapid growth and high profitability has passed, the market remains broadly balanced, with leading players maintaining high utilization rates. In the high-end segment, functional and bio-based BOPA films offer relatively better margins, supporting the expectation that the BOPA film market will maintain moderate, slow growth in the coming years.

This report studies the global Biaxially Oriented Polyamide (nylon) Film (BOPA) production, demand, key manufacturers, and key regions.
