According to our (Global Info Research) latest study, the global Biaxially Oriented Polypropylene (BOPP) Release Film market size was valued at US\$ 13916 million in 2025 and is forecast to a readjusted size of US\$ 22892 million by 2032 with a CAGR of 7.3% during review period.

BOPP Release Film is a functional film made from biaxially oriented polypropylene (BOPP) film as a base material, coated on the surface with silicone or other release agents. Its primary function is to provide non-stick, protective, and easy-peel performance in applications such as adhesive products, labels, packaging, optical films, and electronic films. BOPP release films feature high transparency, tear resistance, heat resistance, and smooth surface, and can be customized in thickness, coating method, and surface properties according to downstream requirements. In 2025, global BOPP film production reached approximately 7.51 M tons, with an average global market price of around US\$ 1,800 per ton. Annual production capacity is 7.8 M tons. Gross Profit Margin: ~18%. The BOPP release film industry chain spans from upstream raw materials to downstream applications. Upstream, the industry relies on BOPP base film manufacturers and silicone/release agent suppliers. Midstream, BOPP release film producers process the base film with specialized coatings and quality control. Downstream, the films are widely applied in adhesive tapes, labels, packaging, optical films, electronic components, and medical tapes, making them an essential link between chemical materials and functional end-use products. The industry is characterized by high technical requirements, economies of scale, and the growing demand for sustainable and recyclable materials. BOPP release film represents a high-value functional material with strong growth potential. The expansion of packaging, electronics, and medical sectors drives consistent demand, while emerging

technologies such as eco-friendly and biodegradable release coatings will shape the future market. Manufacturers that invest in innovation, automation, and quality control are likely to gain a competitive edge, and I anticipate a steady growth trajectory with opportunities for specialty films tailored to high-end applications.
