According to our (Global Info Research) latest study, the global Bicycle Carbon Wheel market size was valued at USD 407.7 million in 2023 and is forecast to a readjusted size of USD 490.6 million by 2030 with a CAGR of 2.7% during review period.

Carbon soaks up road vibrations much better than aluminum – it's why many road bikes are equipped with a carbon fork – so it's understandable that carbon wheels will offer a much improved ride over their aluminum counterparts. With more of the buzz absorbed by the wheels, it'll reduce the fatigue on your body, allowing you to ride further for less energy. Carbon wheels are normally stiffer than aluminum too, so they'll flex less under load – making climbing much more rewarding, as more power is delivered to propel you forward up the ascent.

The utilization of disc brakes with carbon wheels to overcome heating issues to be one of the major factors that will have a positive impact on the growth of the market. The use of disc braking with carbon wheel eliminates one of the key problems of rim heating while braking. The emergence of one-piece carbon fiber wheel with four spokes is one of the latest trends that will contribute to the growth of this market in the forthcoming years. EMEA will be the major revenue contributor to the bicycle carbon wheel market by 2021. The availability of high-quality products using carbon fiber and the utilization of advanced technologies along with the option to customize products, will drive the demand for carbon fiber bicycle wheels in the region during the forecast period.
