Bicycle gearing is a feature of the drivetrain that determines the rate at which the riders are peddling to the rate at which the drive wheel rotate. The gear ratio is fixed for a bicycle with one gear, while it varies for multiple geared bicycles. There is a shifting mechanism that allows the proper selection of the gear, which is effective in increasing the comfort of riding. For instance, top gear can be used for riding downhill, medium for the flat road, and low for uphill.
