Bicycle Wireless Derailleur is a bicycle shifting system that uses wireless technology to control the front and rear derailleurs of a bicycle. This system can replace traditional mechanical shifting cables, making shifting more accurate and responsive.

Traditional bicycle shifting systems require pulling mechanical cables to control the derailleur. These cables can be affected by wear and tension, leading to imprecise shifting. The Bicycle Wireless Derailleur system uses wireless technology to control the derailleur, avoiding the effects of cable wear and tension, resulting in more accurate and responsive shifting.
