## Abstracts

According to our (Global Info Research) latest study, the global Bidirectional Antenna Booster market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Bidirectional antenna booster is an electronic device used to enhance the ability of an antenna system to receive and transmit signals. It is usually designed for use in wireless communication systems such as radio, mobile communications and wireless networks. Its main function is to amplify the received and transmitted signals from the antenna to improve the strength and reliability of the signal. Compared with unidirectional amplifiers, bidirectional antenna gainers can simultaneously enhance the ability of the antenna to receive and transmit signals, so it is called bidirectional. This makes it very useful in two-way communication systems, such as duplex communication systems, where signals can be transmitted in both directions on the same frequency at the same time.
