According to our (Global Info Research) latest study, the global Bidirectional Fast Charging Power Bank market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A bidirectional fast charging power bank is a portable charger or battery pack that supports both fast charging of connected devices and fast recharging of the power bank itself. It is designed to provide efficient and rapid charging solutions for smartphones, tablets, laptops, and other electronic devices. The term 'bidirectional' indicates that the power bank can charge and discharge power in both directions. This means that it can not only supply power to connected devices but also receive power from an external power source for recharging. This feature allows the power bank to be quickly replenished, reducing the downtime between charging cycles. The 'fast charging' capability means that the power bank supports high-power output and input, enabling faster charging speeds compared to conventional power banks. It often utilizes advanced charging technologies, such as Qualcomm Quick Charge, Power Delivery (PD), or proprietary fast charging protocols. With bidirectional fast charging, users can charge their devices rapidly while on the go, even heavy-duty devices like laptops or gaming consoles. Additionally, when the power bank's battery is depleted, it can be recharged swiftly using a compatible fast charger or a higher-powered USB port on a computer or wall outlet.
