According to our (Global Info Research) latest study, the global Big Data Security Management and Control System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The big data security management and control system aims at the security weakness of the Hadoop big data platform and its components, through a completely self-developed big data component gateway, it realizes protection functions such as access control, sensitive identification, desensitization, encryption, and export watermark of data in the platform. At the same time, it provides a baseline check function for service operation and security configuration for the situation where there are many configurations of Hadoop components and there is no standard. It regularly checks the service operation and configuration status, timely discovers the security risks of the components themselves, and realizes the data in the Hadoop environment. Integrated security from storage to output.
