The global Big Data Security Management and Control System market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The big data security management and control system aims at the security weakness of the Hadoop big data platform and its components, through a completely self-developed big data component gateway, it realizes protection functions such as access control, sensitive identification, desensitization, encryption, and export watermark of data in the platform At the same time, it provides a baseline check function for service operation and security configuration for the situation where there are many configurations of Hadoop components and there is no standard. It regularly checks the service operation and configuration status, timely discovers the security risks of the components themselves, and realizes the data in the Hadoop environment. Integrated security from storage to output.
