Abstracts

Bilayer microspheres have a core-shell structure, where a biodegradable polymeric material mixed with a drug serves as the core of the microsphere and another biodegradable polymeric material serves as the shell. Unlike pore-forming microspheres, the release of bilayer microspheres depends mainly on the core-shell structure.

According to our (Global Info Research) latest study, the global Bilayer Microspheres market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
