According to our (Global Info Research) latest study, the global Bile Aesculin Agar market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Bile aesculin agar is a selective and differential growth medium used primarily for the identification of enterococci and group d streptococci. It contains bile salts, which inhibit the growth of gram-positive bacteria, and aesculin, which can be hydrolyzed by certain bacteria. When aesculin is hydrolyzed, it reacts with iron salts in the medium to produce a dark brown or black complex, indicating a positive result. This medium is particularly useful in clinical microbiology for the isolation and identification of enterococci from clinical specimens, as well as in food microbiology to detect fecal contamination. Its selective properties make it an important tool for distinguishing these organisms from other non-target bacteria.
