The global Bile Duct Clamp market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Bile duct clamp is surgical instrument used to temporarily occlude or block the bile duct during hepatobiliary or pancreatic surgical procedures. It typically consists of two curved blades with serrated jaws that can be clamped shut to restrict the flow of bile. The bile duct clamp allows surgeons to control the flow of bile during procedures such as cholecystectomy (gallbladder removal), hepatectomy (liver resection), or biliary duct exploration, minimizing the risk of bile leakage and facilitating safer surgical interventions.

This report studies the global Bile Duct Clamp production, demand, key manufacturers, and key regions.
