According to our (Global Info Research) latest study, the global Biliary Stents market size was valued at USD 216.7 million in 2023 and is forecast to a readjusted size of USD 271.3 million by 2030 with a CAGR of 3.3% during review period.

Biliary stents are small mesh-like tubes, which do not contain any coating or covering. Stents are inserted into the liver to treat hepatic blockage and obstructive hepatic diseases, such as jaundice, cholecystitis, hepato-biliary diseases, and cholangitis. Biliary stents are utilized to treat obstruction present in the bile duct.

Increase in demand for minimally invasive techniques, technological advancements, and rise in geriatric populations are key drivers for the growth of market. In addition, increase in awareness of the population and rise in demand for bioresorbable stents fuel the market growth. The growing preference for minimally invasive (MI) procedures will drive the growth prospects for the global biliary stents market until the end of 2021. The market is witnessing an increasing demand for MI procedures to treat biliary diseases because these procedures deliver superior results with minimal complications and are increasingly used to manage diseases such as gallbladder-related diseases, pancreas-related diseases, and liver-related diseases. The Americas accounted for the majority market share during 2016 and will continue to dominate the market throughout the forecast period owing to the increasing prevalence of gastrointestinal disorders.
