Abstracts

The global Bimetallic Barrel and Screw market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029). A bimetallic barrel and screw for injection molding machines are made up of two different materials. The screw is made up of two different metals, while the barrel is made up of a single material. The purpose of incorporating two different metals is to provide better resistance to wear and tear, which is an essential requirement for the molding process. The bimetallic barrel and screw are designed to increase the lifespan of the molds while delivering better product performance and consistency. The use of different materials in both the screw and barrel enhances the wear resistance, making it less susceptible to corrosion and heat damage. This, in turn, improves the longevity of the overall injection molding equipment, while delivering precision results. The bimetallic screw and barrel combination also provide manufacturers with more flexibility, as they can easily switch between materials, without sacrificing the quality of the end product. Additionally, it allows for quick and easy maintenance, with fewer replacement requirements.

This report studies the global Bimetallic Barrel and Screw production, demand, key manufacturers, and key regions.
