The global Binary Counter IC market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A binary counter IC is a chip designed to count the number of pulses or events that occur in digital circuits. These chips memorize the events and show the count of events at output port. The chip memorizes the event and shows the output in binary code, hence the name BINARY COUNTER. What binary counter does it each time a pulse is appeared at clock pin, it counts it and stores the value.
