## Abstracts

According to our (Global Info Research) latest study, the global Bio Alcohol market size was valued at USD 7409.2 million in 2023 and is forecast to a readjusted size of USD 10510 million by 2030 with a CAGR of 5.1% during review period.

Bio alcohols are sustainable organic chemicals that possess important physiological properties through the fermentation of sugar or cellulose. Bio-alcohols are environment-friendly and mainly used in transportation as an alternative to gasoline.

A key driver of the global bio alcohol market is the imminent shortage of fossil fuels and the growing pollution problems their consumption is creating. The use of bio alcohol will help control the greenhouse effect to a major extent, reducing various regions' carbon footprint. Apart from this, the power potential of bio alcohols is also high, making it a highly feasible class of fuels to be used at large scales. From a regional perspective, the bio alcohol market for developed economies in Europe and North America has always been significant. The future of this market will, however, be directed largely by the emerging economies, owing to the high potential they hold in terms of production and demand for bio alcohol.

The Global Info Research report includes an overview of the development of the Bio Alcohol industry chain, the market status of Transportation (Bio Methanol, Bio Ethanol), Infrastructure (Bio Methanol, Bio Ethanol), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Bio Alcohol.
