Bioethanol offers higher-octane fuel alternative and is also used for energy oriented applications, such as power generation. Its applications in trucks, buses, airplanes, medical industry, and fuel cells is to lift the growth in the market. The blending of bioethanol with petrol can increase the life span of diminishing oil supplies and ensure greater fuel security globally. Bioethanol is also considered due to its biodegradability and low toxicity than fossil fuels.

Scope of the Report:

This report focuses on the Bio-Alcohols in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Demand for long-term energy security, especially from the emerging countries, and the eco-friendly nature of bio-alcohols are the factors that drive the growth of the market. However, consumption of food grains as feedstock is anticipated to hamper the market growth in the coming years due to increase in population. The volatile prices of crude oil is a major trend expected to create opportunities for bio-alcohols market. Germany was the largest producer and consumer of biofuels as of 2014. The stringent government regulations towards a greener and sustainable environment drive the Bio-alcohols market in Germany. However, the lack of availability of bio-based raw materials is still a major challenge the Germany market faces. The worldwide market for Bio-Alcohols is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
