Abstracts

The global Bio-based 2-Octanol market size is expected to reach \$ 182 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Bio-based 2-Octanol is a colorless or pale yellow liquid produced from the biomaterial castor oil. It is mainly used in the production of plastic plasticizers, synthetic fragrances, mineral flotation agents, defoamers, synthetic fiber oil agents, pesticide emulsifiers, etc. In 2025, global Bio-based 2-Octanol production reached approximately 87,873 Tons, with an average global market price of around US\$ 1,442 per ton.

The main driving factors for biobased 2-octanol are the tightening of global carbon reduction policies, the increasing attention of brands and end customers to biobased content and sustainable materials, as well as the rigid demand for green raw materials in some high-end chemical and consumer goods fields. In the medium to long term, with the improvement of the supply system of bio based raw materials, the scaling up of processes, and the maturity of technologies, the cost gap is expected to gradually narrow. Bio based 2-octanol can supplement or even replace traditional products in some application fields, becoming a strategically significant structural growth direction in the secondary octanol market.

This report studies the global Bio-based 2-Octanol production, demand, key manufacturers, and key regions.
