Abstracts

According to our (Global Info Research) latest study, the global Bio-Based Acrylates market size was valued at US\$ 677 million in 2025 and is forecast to a readjusted size of US\$ 1094 million by 2032 with a CAGR of 7.1% during review period.

Bio-based acrylates are acrylate compounds produced from renewable biomass (such as starch, cellulose, vegetable oil, molasses, etc.) through bio-fermentation or chemical conversion processes. They are a sustainable alternative to petroleum-based acrylates. Their core advantages lie in a 30%-80% reduction in carbon footprint, use of renewable raw materials, and environmental friendliness, while maintaining comparable chemical properties and application effects to petroleum-based products.

The upstream of bio-based acrylates involves biomass raw materials (starch-based, cellulose-based, vegetable oil-based, sugarcane-based, biodiesel by-product-based, etc.) and pretreatment. The core midstream technologies are catalytic conversion, esterification reactions, and polymerization processes. Downstream applications are highly diversified, covering multiple fields such as coatings, adhesives, plastics, textiles, and personal care.

In 2025, global sales of bio-based acrylates reached 325,000 tons, with a production capacity of approximately 450,000 tons, an average selling price of US\$2,025 per ton, and an average gross profit margin of 28%-32%.
