According to our (Global Info Research) latest study, the global Bio-based Inks market size was valued at US\$ 846 million in 2024 and is forecast to a readjusted size of USD 1541 million by 2031 with a CAGR of 8.9% during review period.

Bio-based inks are environmentally friendly printing inks made primarily from renewable resources such as plant oils, natural resins, and other biodegradable materials, instead of petroleum-based components. These inks are designed to reduce the environmental impact of printing by minimizing the use of volatile organic compounds (VOCs) and non-renewable raw materials. Common bio-based ingredients include soybean oil, linseed oil, and other vegetable oils, which serve as binders and carriers for pigments. Bio-based inks are widely used in packaging, publishing, and eco-conscious printing applications, aligning with sustainable practices and regulatory requirements for greener solutions.
