According to our (Global Info Research) latest study, the global Bio Based Polyethylene Furanoate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Polyethylene furanoate is a completely recyclable bio-based polymer which has derived from plants that have potential to replace an extensively used polymer, namely polyethylene terephthalate (PET), this is a long-lasting material which has derived from the conventional resources. It outperforms in terms of mechanical and moisture barrier properties. Furthermore, bio based PEF has higher tensile strength that requires less additives than polyethylene terephthalate, and can be used in the PET recycling process up to 5%.
