Abstracts

The global Bio Based Polyethylene Furanoate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Polyethylene furanoate is a completely recyclable bio-based polymer which has derived from plants that have potential to replace an extensively used polymer, namely polyethylene terephthalate (PET), this is a long-lasting material which has derived from the conventional resources. It outperforms in terms of mechanical and moisture barrier properties. Furthermore, bio based PEF has higher tensile strength that requires less additives than polyethylene terephthalate, and can be used in the PET recycling process up to 5%.
