Abstracts

Bio-based resins are synthetic compounds made from renewable raw materials. These resins are different from conventional resins and are used for the manufacturing of various products such as packaging materials, furniture, carpets, films, bottles, cups, and automotive parts. Raw materials required for the production of bio-based resins are sugar cane, wood pulp, soybean, coffee, castor plant seeds, corn, and many other plant-, marine-, and forestry-based materials.

Scope of the Report:

This report focuses on the Bio-Based Resins in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Growing consumer interest toward eco-friendly packaging materials is expected to drive the market during the forecast period. Factors, such as rising sales of green products (as they offer functional benefits), and need for sustainable manufacturing process, are expected to stimulate the demand for bio packaging materials made by bio resins. Also, these growing consumer preference for eco-friendly packaging is resulting in shifting interest among plastic manufacturers toward bio resin-based products, thereby driving the market. Europe accounted for the largest market share during 2016 and will retain its market dominance during the predicted period. The European market is witnessing a high rate of penetration of compostable bio-based waste bags and loose-fill packaging materials. The provision of subsidies from the governments to promote the use of bio-based or biodegradable resins will fuel the use of bio-based resins across various end users in this region.

The worldwide market for Bio-Based Resins is expected to grow at a CAGR of roughly

xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
