Abstracts

Bio-ceramic are ceramic materials that are biocompatible. They are important subset of biomaterials and used in different types of medical procedures. They are typically used as rigid material in surgical implants though some product are flexible. These are materials used for medical applications, primarily for implants in orthopedics, maxillofacial surgery and for dental implants. Also, it is used for the repair and reconstruction of diseased or damaged parts of muscular- skeletal system and also used for replacing hard tissues in the body like teeth and bone.

According to our (Global Info Research) latest study, the global Bio-Ceramic market size was valued at US\$ 284 million in 2023 and is forecast to a readjusted size of USD 608 million by 2030 with a CAGR of 11.4% during review period.

Growing prevalence of osteoarthritis among increasing geriatric population around the world is expected to drive the growth of bio-ceramics market over coming years. The orthopedic sector is expected to witness a growth due to increasing surgical intervention trends for shoulder, knee and hip transplant at early stage. One of the major opportunities in growth of market is growing medical tourism. Some of countries like Malaysia, India, and China provide low cost for health treatment. People from countries like US and UK travel to these countries for seeking treatment as they provide superior health facilities at low cost. For instance, patients travel to India for dental treatment due to low cost surgery. These implants use ceramics, hence leading to the growth of market.
