Abstracts

The global Bio-decontamination Equipment market size is expected to reach \$ 573 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

HPV is well recognized as a bio-decontamination agent due to its broad biological efficacy and can quickly deactivate microorganisms much more effectively than traditional decontamination methods such as formaldehyde. HPV has been tested on many individual microorganisms and classes of organisms successfully and has excellent material compatibility. HPV technology enables clients to leave computer equipment or any other devices in the room during the bio-decontamination process, unlike with other disinfection regimes, which can cause equipment damage. HPV decontamination systems operate at room temperature with relative humidity, without the need for significantly reduced humidity, unlike with traditional systems.

Global Bio-decontamination Equipment key players include STERIS Life Science, Bioquell, Fedegari Group, TOMI Environmental Solutions, etc. Global top four manufacturers hold a share over 70%.

North America is the largest market, with a share about 35%, followed by Europe, and Asia-Pacific, both have a share about 60 percent.

In terms of product, Vaporized Hydrogen Peroxide Sterilization is the largest segment, with a share over 65%. And in terms of application, the largest application is Pharmaceutical Manufacturing, followed by Bioscience Research, Hospital and Healthcare.

This report studies the global Bio-decontamination Equipment production, demand, key manufacturers, and key regions.
