According to our (Global Info Research) latest study, the global Bio-Detection market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Bio-detection has emerged as a solution to the public and governments. With an increase in bio-terrorism, the occurrence of illness and deaths is very frequent. This event is caused by the airborne chemicals or pathogens that are released by a terrorist or a group of people or even by an individual for a motive. These pathogens can be detected by a system called bio-detection, which signals the entry or the existence of a virus.

The bio-detection market is being majorly driven due to increasing awareness about bio-terrorism and biological warfare. It is anticipated to propel the demand for bio-detection and drives the global market of bio-detection market. The increasing support from the government to develop effective bio-detection technologies also enhance the growth of bio-detection market over the forecast period. The need for an early detection system for bio-terrorist attack also boost the demand for bio-detection systems. However, the problems faced in the detection of minute pathogens, may hamper the growth of bio-detection market. The increasing misuse of scientific technologies along with increasing circulation of harmful biological agents also restraining the growth of the bio-detection market.
